

Hwy. 60, Cedarburg, WI

Personal Watercraft Winterization Service

Propulsion System

1. Jet pump cleaning. Spray with water to remove sand & debris, coat with XPS lube.
2. Jet pump inspection. Remove reverse gate and impeller cover, check lube in jet pump.
3. Inspect wear ring & impeller. Inspect wear ring surface for wear. Inspect impeller for wear & damage to blades.
4. Drive shaft corrosion protection. Coat driveshaft and components with XPS lube.

Fuel System

1. Fuel system inspection. Check fuel tank, hoses & clamps
2. Fuel system protection. Treat fuel with stabilizer, fill tank*.
3. Lubricate throttle body with storage oil.

Engine Components

1. Oil & filter replacement. **Change engine oil, filter & appropriate O-rings.**
2. Intercooler draining (if equipped). It is very important to expel any water from the intercooler (procedure varies by model).
3. Exhaust system protection. Drain exhaust manifold with air pressure.
4. Coolant. **Replace antifreeze** for freeze protection and corrosion protection.
5. Internal lubrication. Storage oil into each cylinder. **Install new spark plugs.**

Electrical System

1. Battery removal. Remove battery, clean, charge, test and store battery.
2. Maintenance reminder. Check memory for fault codes. Reset maintenance reminder.

Detailing

1. Remove drain plugs.
2. Lube cables. Lubricate steering & reverse cables.
3. Bilge cleaning. Clean bilges with detergent, rinse thoroughly, drain completely.
4. Body and hull cleaning. Wash body and hull with mild detergent specified for boats.
5. Anti-corrosion treatment. Wipe down engine compartment, spray metallic components with lube.

Parts typically used:

- 1 – Lube
- 4 – O-rings for pump nozzle and lube check
- 1 – Fuel stabilizer (full tank of gas required)
- 4 – Quarts of oil
- 1 – Oil filter
- 3 – O-rings for oil change

- 3 – Spark plugs
- 1 – Storage oil
- 1 – Non-toxic, biodegradable anti-freeze
- 4 – Quarts of coolant

Note: sequence of tasks is very important.

**fuel used to fill tank extra*
